

WEEKLY STATUS REPORT

DATE: 4/10/2016 – 4/16/2016

What I did this week:

- It was suggested by graduate students to create the GUI in any language and have it output a text file with the assigned parameters. Next, have the PLC read this text file and implement the specified parameters.
- Completed weekly status report

Any issues I encountered:

- Needed to update Visual Studio to 2015 version
 - Required password from a member of last year's capstone
 - Uninstalled/Reinstalled program and old code did not work
 - Installed libraries from original version and code worked

What I will be working on next:

- Designing and building the new graphical interface

Notes: None
