

WEEKLY STATUS REPORT

DATE: 5/15/16 – 5/21/16

What I did this week:

- Printed cubes (.5, 1, 2 inch) – found best results when we slowed down the CNC machine
- Successfully able to print 2 inch cube for about 25 minutes
- Aram would like to add a “PAUSE” button to halt the welder
- Duty cycle for welder is working as expected – slight delay
- Revised capstone report
- Completed weekly status report

Any issues I encountered:

- Ran out of wire while printing the last cube (which yielded the best results) ☹

What I will be working on next:

- Continue working on capstone report
- Work on capstone poster

Notes:

None
